

3 Steps to Surviving the 2G/3G Sunset

The popularity of 4G has grown immensely with 5G not far behind it, ultimately leaving 2G and 3G connectivity to be sunset globally. This sunset leaves many businesses scrambling to prepare for the transition. Use these 3 effective steps to help you navigate and prepare for the impending 2G/3G sunset.

Understanding Your Technology Investment

Ask yourself:

- How many devices are you managing and how many will be impacted?
- Which networks are each device on?
- What carriers are these devices connected to?

Find a Replacement LTE Solution

Work with an expert to understand your organization's exact needs. Custom device manufacturers can also help create LTE-capable devices built just for your business.

JACS Solutions' TD191, LTE USB Dongle is a driverless dongle made to provide up to 4G LTE speeds to most devices requiring only a USB port.

Get Ahead of Shutdown Dates

Many major carriers have already released their shutdown schedules with the majority expected for as early as 2020. Work directly with your carrier for exact dates and network shutdown details.
