JACS SOLUTIONS FOR MANUFACTURING & INDUSTRIAL

KEEP TEAMS CONNECTED, INFORMED, AND SAFE

JACS Solutions' custom-built IoT solutions automate business critical workflows and provide the mobility and intelligence that team members need to manage them locally or remotely. Even in tough environments where heavy machinery and rough handling are common, JACS industrial IoT solutions perform without compromise to optimize processes and reduce waste.

DURABLE
Industrial-grade hardware built to withstand harsh manufacturing environments.

CONNECTED
Real-time, reliable, and secure connectivity that maximizes operational uptime.

SECURE
Limit access to protected data and keep workers focused on value-generating activity.

KEEP RESOURCES CONNECTED AND PRODUCTIVE

AUTOMATED WORKFORCE MANAGEMENT

Manage worker schedules, monitor safety, and enable advanced applications from a custom-built platform that makes it easy to collaborate electronically, log time, track progress, and assign work.

TURN DATA INTO VALUABLE INSIGHT

Streamline cross-functional team collaboration with smart tools designed to connect platforms and people. JACS helps you build mobile workstations so teams can contribute valuable insight and intelligence for more informed decision-making at all points in your workflow.

INDUSTRIAL-GRADE IoT SOLUTIONS

REDUCE OPERATIONAL DOWNTIME

JACS helps keep on-site workers safe and productive when equipment fails by powering AR solutions that allow remote subject matter experts to see exactly what the on-site worker sees. The worker wearing the device can simultaneously view product manuals and collaborate with support resources to bring equipment back online in minutes instead of hours.

INTEGRATE LEGACY EQUIPMENT

JACS creates custom firmware and hardware solutions that integrate with legacy systems to prevent obsolescence and connect equipment to optimize operations, maintain uptime and increase profitability. Our unique customization expertise offers ports, peripheral connections, and integrated hardware that is purpose-built for your business and keeps teams working at peak efficiency.

PREDICTIVE ANALYTICS AND REAL-TIME DATA SOLUTIONS

Improve your organization's ability to remotely or locally control operations and monitor the health of high-value assets by deploying or retrofitting facilities, equipment, and teams with secure and reliable connectivity solutions that maximize productivity.
