

# JACS SOLUTIONS FOR PUBLIC SECTOR

## CUSTOM-BUILT, MISSION-CRITICAL CONNECTED SOLUTIONS

Innovative technology solutions aren't restricted to the private sector. Federal, state, and local government agencies rely on connected, secure, and intelligent technology solutions to perform many critical functions, from defense to health and public safety, and education. JACS helps to enable and optimize public sector daily and mission-critical operations with connected IoT solutions custom-built to meet specific agency or department goals in any environment.

### SUPPORT THE MISSION

Make mission-critical decisions in real time with access to data and analytics from anywhere.

### SECURITY & PRIVACY

Protect sensitive data and control access using secure mobile communications protocols and custom device firmware.

### SAFETY & COMPLIANCE

Protect your workforce and your operations with customized solutions that fully comply with federal mandates.

## THE JACS DIFFERENCE

### PURPOSE-BUILT, CUSTOM HARDWARE

Our innovative approach to hardware customization maximizes both durability and flexibility while allowing scalable integration of existing infrastructure in Cellular, Wi-Fi, and Private LTE and can be certified for use on carrier networks and TAA compliant.

### SECURITY-FOCUSED FIRMWARE CUSTOMIZATION

Protect your operations with locked-down firmware, encrypted data transfer and a tamper-proof interface that removes "bloatware" and consumer-oriented OS features and provides total control over what users and applications connect to their networks.

# STRATEGIC MISSION-CRITICAL IOT SOLUTIONS

## FEDERAL

Federal agencies and departments rely heavily on connected technology solutions to perform critical functions that deliver essential programs and services to the public. These operations take on many forms, from security and defense to protecting natural resources and maintaining municipal infrastructure. Essential government operations demand connectivity solutions that ensure privacy and reliability and that adhere to compliance standards.

## STATE & LOCAL

Whether it's advancing communities through smart city technology or supporting the education and rehabilitation of the incarcerated, state governments and local municipalities need to integrate intelligent technologies to ensure their citizens remain safe, healthy, and productive. Doing that effectively requires fully customized and connected solutions that enable agencies and departments to implement the Internet of Things into everyday applications.

## EDUCATION

The learning environment is constantly evolving, and educational systems and institutions need cost-effective, easy-to-deploy learning solutions that enable children from all backgrounds to achieve their highest potential. With customized IoT solutions, schools can extend classroom learning, bridge the digital divide, and keep students engaged and focused—whether they are across the room or across the country.
