

JACS SOLUTIONS FOR TRANSPORTATION

CUSTOMIZED, ROAD-READY MOBILE SOLUTIONS

Fleet managers have recognized the need to integrate technology into their daily operations, with applications such as electronic logging, GPS tracking, and inspection and maintenance scheduling. However, finding a device purpose-built to meet — and survive — the demands of the environmental conditions of the road is a growing challenge. Off-the-shelf smart devices cannot offer the flexibility and quality needed to manage fleet and mobile personnel.

ROAD-READY TECHNOLOGY

Technology solutions and accessories that perform even in extreme conditions.

SAFETY AND COMPLIANCE

Protect your workforce with tools that keep them focused, productive, and in compliance with critical mandates.

CUSTOM SYSTEMS INTEGRATION

Track inventory, monitor assets, and optimize operations on-site or remotely with end-to-end integrated solutions.

REAL-TIME RESPONSIVENESS AND RELIABILITY

OPTIMIZE FLEET MANAGEMENT

Quickly deploy ELD systems so your team can provide real-time data without the hassle of hand-held devices and unreliable wireless connectivity. By removing bloatware at the operating system level, JACS can optimize fleet management devices for performance and insight.

SECURE, RELIABLE GPS NAVIGATION

From Syracuse to San Diego and everywhere in between, JACS keeps operations on the move with accurate and optimized routing on customized hardware certified for use on major carriers' wireless networks.

CONNECTED TRANSPORTATION & LOGISTICS SOLUTIONS

ENABLING FLEET OPERATIONS

When efficiency directly translates to your bottom line, reliable and responsive teams are critical to success. JACS can design customized, road-ready mobile solutions that seamlessly link fleet and operations managers to remote teams and assets. In real-time, you can track inventory, electronically log driver and vehicle data, monitor asset health, and optimize routing to reduce costs caused by delays and inaccuracies.

ENHANCING STUDENT TRANSPORTATION

Management and administration of student transportation is uniquely complex, combining the need for rider safety with the logistical challenges of keeping buses on schedule and drivers and fleets operating at peak performance. JACS has designed modular transportation platforms that ensure student safety, optimize routing, and increase operational efficiency.

EMPOWERING DISTRIBUTED TEAMS

JACS supports mobile teams in changing traditional transportation and logistics business models with end-to-end technology solutions that improve efficiencies, reduce costs, protect assets, and ensure compliance. We build hardware durable enough to survive physical stress and flexible enough to work with a multitude of peripherals — from the dashboard to the warehouse floor.
